

IHAN HANSAJA

FULL STACK DEVELOPER

301/7 Seelananda Mw, kotikawatta. | ihanhansaja5@gmail.com | www.ihanhansaja.dev

Passionate about Full-Stack web development, I build dynamic, scalable, and user-friendly websites using modern web technologies. I excel at solving technical challenges through innovation and collaboration, ensuring seamless and impactful digital experiences.

AREA OF EXPERTISE

Programming	Leadership	3D design
Problem Solving	Artificial Intelligence	Communication
Teamwork	Agentic AI	Data Structures

KEY ACHIEVEMENTS

- **Award-Winning Research.** Secured *Best Oral Presentation* at the CINEC Symposium 2024 among 270+ abstracts for research on optimizing OFDM network performance using reinforcement learning for 5G systems.
- **Enterprise System Development.** Contributed to the development of a smart employee management system for SLT-Mobitel, transforming manual workflows into a digital platform with employee assessments, training modules, and performance tracking.

EXPERIENCE

Intern Full Stack Developer, SLT-Mobitel	Oct 2025 – Apr 2026
• Contributed to a multi-million-dollar digital transformation project focused on smart employee management. • Developed full-stack features for employee assessments, training courses, and performance tracking systems. • Improved workflow automation by helping modernize manual processes into centralized digital solutions.	

PROJECTS

Outbreak – AI-Powered Disaster Management System	Oct 2025 - Present
• Developed a full-stack disaster management platform for real-time flood prediction using 1.5M+ data points across 80+ monitoring stations. • Built AI forecasting pipelines using XGBoost, LSTM, and TFT models, achieving high prediction accuracy ($R^2 > 0.99$). • Created role-based dashboards with live alerts, geospatial visualization, and offline emergency support features. • Tech Stack: Next.js, TypeScript, Python, FastAPI, Supabase, PostgreSQL, Tailwind CSS.	
Battlezik – E-Sports Competitive Platform	Oct 2025 - Present
• Designed and developed a real-time esports platform supporting tournament management, matchmaking, and dynamic prize pool systems. • Implemented WebSocket-based real-time features and secure transaction workflows for competitive match coordination. • Built scalable frontend and backend architecture optimized for responsive and high-performance user experiences. • Tech Stack: Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, GSAP, Three.js, SWR.	
Serendib Warehouse Management System (WMS)	Oct 2024 – Apr 2025
• Built an enterprise warehouse system to digitize inventory, logistics, and order processing workflows. • Implemented role-based access control with real-time inventory updates to reduce manual errors and improve efficiency. • Developed scalable APIs with cloud integration for reporting, tracking, and warehouse operations. • Tech Stack: Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, GSAP, Three.js, SWR.	

ADDITIONAL INFORMATION

Languages: Sinhala, English

Certifications: e

Awards: Best Oral Presentation of Research at CINEC International Research Symposium (2024)
