

IHAN HANSAJA

FULL STACK DEVELOPER

301/7 Seelananda Mw, kotikawatta. | ihanhansaja5@gmail.com | www.ihanhansaja.dev | [LinkedIn](#)

Passionate about Full-Stack web development, I build dynamic, scalable, and user-friendly websites using modern web technologies. I excel at solving technical challenges through innovation and collaboration, ensuring seamless and impactful digital experiences.

TECH STACK

Next JS/React	Express JS/Node JS	Supabase/MongoDB/Firebase	Three JS/R3F
JavaScript/Typescript	MySQL/PostgreSQL	AWS/GCP	AI (ML/DL) / REST APIs
Python/FastAPI	Git/Docker/CI-CD/K8S	Blender/Unity	Figma/Stitch/Photoshop

KEY ACHIEVEMENTS

- **Award-Winning Research.** Secured *Best Oral Presentation* at the CINEC Symposium 2024 among 270+ abstracts for research on optimizing OFDM network performance using reinforcement learning for 5G systems.
- **Enterprise System Development.** Contributed to the development of a smart employee management system for SLT-Mobitel, transforming manual workflows into a digital platform with employee assessments, training modules, and performance tracking.

EDUCATION

- B.Sc. (Hons) in Software Engineering — CINEC Campus, Malabe (expected 2026) | GPA 3.80+
- O/L & A/L — D.S. Senanayake College, Colombo 07.

EXPERIENCE

Intern Full Stack Developer, SLT-Mobitel Oct 2025 – Apr 2026

- Contributed to a multi-million-dollar digital transformation project focused on smart employee management and developed full-stack features for employee assessments, training courses, and performance tracking systems.
- Improved workflow automation by helping modernize manual processes into centralized digital solutions.
- Tech Stack: React, Tailwind CSS, Express Js, Node JS, MySQL, AWS, Nginx, TypeScript, AJAX.

PROJECTS

Outbreak – Next JS, LSTM, TFT, XGBoost, Tailwind CSS, Arduino Oct 2025 - Present

- Developed a full-stack disaster management platform for real-time flood prediction using 1.5M+ data points across 80+ monitoring stations.
- Built AI forecasting pipelines using XGBoost, LSTM, and TFT models, achieving high prediction accuracy ($R^2 > 0.99$).
- Created role-based dashboards with live alerts, geospatial visualization, and offline emergency support features.

Battlezik – Next JS, R3F, GLSL, Supabase, Tailwind CSS Oct 2025 - Present

- Designed and developed a real-time esports platform supporting tournament management, matchmaking, and dynamic prize pool systems.
- Implemented WebSocket-based real-time features and secure transaction workflows for competitive match coordination.
- Built scalable frontend and backend architecture optimized for responsive and high-performance user experiences.

Serendib WMS – React JS, Express JS, Node JS MySQL, AWS, Docker Oct 2024 – Apr 2025

- Built an enterprise warehouse system to digitize inventory, logistics, and order processing workflows.
- Implemented role-based access control with real-time inventory updates to reduce manual errors and improve efficiency.
- Developed scalable APIs with cloud integration for reporting, tracking, and warehouse operations.

ADDITIONAL INFORMATION

Languages: Sinhala, English, Japanese (beginner)

Certifications: Microsoft Office, CINEC e-sports competitor, SQL, MYSQL, POSTGRESQL & MONGODB: All-in-One Database Course (Udemy), IX24 UI/UX design competition, build a Machine Learning Model using Custom Vision (Microsoft)
